[Wireless Indoor Survey](#) [1]

The purpose of a wireless site survey is to help you plan and design a wireless network. With our service, we will use wireless site survey best practices to identify all the wireless access points throughout your office. Our engineers will discover the optimal access point placements based on these findings.

We also figure out where the best coverage areas are, and generate a report that shows the best steps to take when designing your network.

This specific service is only available for locations up to 50,000 sq. ft. in size. We also offer a service that's for areas up to 100,000 sq. ft, so feel free to check that out if it suits you better.
