

Video Guidelines for Techfinder.org.au

Techfinder.org.au is a community site where people go to share experiences and advice with their peers. As a contributor to Techfinder, you can upload pre-recorded Auslan videos to share your experiences of using technology to support communication.

Technical requirements:

- Videos should be at least HD 720p (1280x720)
- In .avi, .mov, .mp4, or .m4v format
- Landscape or portrait orientation

Some video tips:

- Make sure the place you are recording your video has good lighting, however don't record in front of an open window or bright light as it will be difficult to see your signing.
- Review your video before you send it. Make sure it is clear and plays smoothly, without any glitches. If you're having troubles, we have in-house video editors, captioners and Auslan interpreters who can help you.
- It's best to upload your video via Wi-Fi, as mobile networks can be slow and expensive.
- Be aware of your clothing and the background when recording your video. People come to Techfinder.org.au for advice and to learn about your experiences. Please ensure you're tidy and presentable in your video.
- Please articulate your signing clearly, so your viewers can understand what you want to say.
